

Figure 2. The vertical bars indicate days on which bacterial events occurred, blue = type 1, magenta = type 2, gray = types 1 and 2, gold = type 3. Sea level measured at Los Angeles is shown at the bottom of the figure. A black dot is plotted at each time and location a sample was taken. Colored symbols are plotted at the time and location of samples exceeding AB411 single sample standards. The size of the symbol is proportional to the ratio of the measured bacterial concentration to the AB411 criteria. The symbol size for a sample equal to the AB411 criteria is shown to the right of the indicator species in the legend.
